

High Number of Claims

Do you ship product, only to have it damaged when your customer receives it? Do you spend a great deal of time processing claims for damaged goods? How about a claim rejected even though you know your product has been mishandled?

Products you should consider:

ColdMark Label - Temperature monitors for cold sensitive products.

Heatwatch Label Line - A complete line of inexpensive temperature monitoring labels for heat sensitive products.

Heatwatch TR1 - A compact way to observe temperature variations.

Shockwatch Clip - Monitors impact sensitive products with ease. Can be mounted to the product itself.

Shockwatch Label - The inexpensive way to monitor impact sensitive shipments.

Shockwatch MAG 2000 - A resettable impact monitor for large, palletized or containerized shipments.

Tiltwatch - For monitoring shipments that must remain upright.

Tiltwatch Plus - For monitoring the exact tilt level for shipments that must remain upright.

WarmMark Label - Time-temperature tags for monitoring the duration of damaging temperatures.

Need a Marketing Edge?

Would you like your customers to know that you care about the condition of the products they receive from you? Do you want to be known as a "quality" supplier? Do you want your customers to be aware of the added value they receive when purchasing from you?

Products you should consider:

ColdMark Label - Temperature monitors for cold sensitive products.

Heatwatch Label Line - A complete line of inexpensive temperature monitoring labels for heat sensitive products.

Shockwatch Clip - Monitors impact sensitive products with ease. Can be mounted to the product itself.

Shockwatch Label - The inexpensive way to monitor impact sensitive shipments.

Shockwatch MAG 2000 - A resettable impact monitor for large, palletized or containerized shipments.

Tiltwatch - For monitoring shipments that must remain upright.

Tiltwatch Plus - For monitoring the exact tilt level for shipments that must remain upright.

WarmMark Label - Time-temperature tags for monitoring the duration of damaging temperatures.

Product Spoilage

Are you concerned about extreme temperatures your product might be subjected to? Do you ship products that will spoil if it goes above a certain temperature? Do you ship a product that, if it is exposed to freezing temperature or below, will no longer be useful? Do you need to accurately monitor the temperature and humidity of a product being shipped?

Products you should consider:

ColdMark Label - Temperature monitors for cold sensitive products.

Heatwatch Label Line - A complete line of inexpensive temperature monitoring labels for heat sensitive products.

Heatwatch TR1 - A compact way to observe temperature variations.

WarmMark Label - Time-temperature tags for monitoring the duration of damaging temperatures.

Quality Control Issues

Do you ship or receive a product that might have internal damage due to mishandling, but not show visible damage? Are you concerned about the quality of your product when it reaches its destination? Are temperature and/or humidity critical to the quality of your products?

Products you should consider:

Shockwatch Clip - Monitors impact sensitive products with ease. Can be mounted to the product itself.

Heatwatch TR1 - A compact way to observe temperature variations.

MicroShocklog - A remarkably affordable advanced shock and vibration monitoring and recording instrument.

Shocklog - Our tri-axial piezo electric accelerometer for measuring and recording shock, temperature, pressure and humidity.

Questionable Storage Conditions

Is it vital that temperature and humidity conditions in your storage facility be monitored? Do you have equipment or products that must be protected against moisture at all times? Are you responsible for damage if product in your storage facility is subjected to moisture?

Products you should consider:

ColdMark Label - Temperature monitors for cold sensitive products.

Heatwatch Label Line - A complete line of inexpensive temperature monitoring labels for heat sensitive products.

Heatwatch TR1 - A compact way to observe temperature variations.

Vapor Corrosion Inhibitors (VCI's) - A comprehensive line of VCI's to fit your corrosion protection needs.

WarmMark Label - Time-temperature tags for monitoring the duration of damaging temperatures.

Desiccant/Humidity Indicator Cards - Desiccants protect the contents of a properly sealed container during shipment or storage through the removal of moisture. Humidity Indicator Cards monitor the relative humidity inside a sealed container or package.

Shipping Damage/Carrier Evaluation

Do you ship high quality products that do not always arrive at their destination in high quality condition? Do you lose money each year for replacement or repair of damaged goods? Would you like to know how various carriers handle your freight?

Products you should consider:

ColdMark Label - Temperature monitors for cold sensitive products.

Heatwatch Label Line - A complete line of inexpensive temperature monitoring labels for heat sensitive products.

MicroShocklog - A remarkably affordable advanced shock and vibration monitoring and recording instrument.

Shocklog - Our tri-axial piezo electric accelerometer for measuring and recording shock, temperature, pressure and humidity.

Shockwatch Clip - Monitors impact sensitive products with ease. Can be mounted to the product itself.

Shockwatch Label - The inexpensive way to monitor impact sensitive shipments.

Shockwatch MAG 2000 - A resettable impact monitor for large, palletized or containerized shipments.

Tiltwatch - For monitoring shipments that must remain upright.

Tiltwatch Plus - For monitoring the exact tilt level for shipments that must remain upright.

WarmMark Label - Time-temperature tags for monitoring the duration of damaging temperatures.

Warranty Abuse

Do you stand behind warranties on products you provide or repair? Do you spend countless dollars and time inspecting and/or repairing warranties for products that left your facility in perfect condition? Would you like to enforce proper handling techniques on products that you rent or release for field use?

Products you should consider:

Shockwatch Clip - Monitors impact sensitive products with ease. Can be mounted to the product itself.
